

## **GeckoSystems' Negotiations for AI Mobile Robot Joint Ventures Increase**

CONYERS, GA, May 8, 2013 -- GeckoSystems International Corp. (Pink Sheets: GOSY | <http://www.geckosystems.com/>) continues its focus on forming joint ventures domestically and internationally. For over fifteen years GeckoSystems has dedicated itself to development of "Mobile Robot Solutions for Safety, Security and Service™."

"While we remain focused on our Pacific Rim business development activities, we now have new, ongoing discussions in several EU and Mediterranean countries, and of course in the US. These discussions are primarily in the areas of commercial security and professional healthcare. We generally get favorable reactions and heightened interest due to our willingness to share risk in the proposed joint ventures. We share risk by requiring no upfront cash licensing fees or royalties until net profits are realized," commented Martin Spencer, President/CEO, GeckoSystems Intl. Corp.

Greater acceptance of personal robots in the EU, a favorable regulatory environment, major national healthcare initiatives by the UK and Dutch governments, and most recently, heightened interest in the security market coming from the private sector are driving this broader attention.

In 2010 the AI navigation software developed for and used on the CareBot™ was migrated and with limited, additional R&D the company was able to create the SafePath™ "collision free" power wheelchair upgrade. This migration proved the extensible and portable nature of GeckoSystems' AI mobile robot architecture and its ability to accelerate development of additional MSR applications. This is why GeckoSystems is gaining worldwide recognition in the robotics field. Research and Markets recently identified GeckoSystems as one of eight "key market players" along side Honda, iRobot, Sony, Toyota, and others. The company is delighted to receive this global recognition.

GeckoSystems' Japanese associate, ZMP has graciously hosted several demonstrations of the company's technologies in their office in Tokyo using the BaseBot that was shipped to them a year ago. The BaseBot demonstrates SafePath, the world's first and only AI navigation system capable of "sense and avoid" of not only stationary obstacles, but also dynamic obstacles, while seeking the user's desired destination.

ZMP's evaluation of the BaseBot was very favorable. ZMP of Japan, a long established vendor of robotic research platforms, has confirmed that the navigation system used in the BaseBot (and hence CareBot, etc.) is "sophisticated" and "fully developed."

Due to these recent demonstrations, GeckoSystems is in ongoing discussions concerning joint ventures and/or licensing of their proprietary technologies to develop products in the security and healthcare sectors in China, Japan, Taiwan, and the EU and one Mediterranean country. There are world wide demographic changes that are expanding opportunities in the health care market globally, but in the Pacific Rim, EU and Mediterranean, the need is urgent and GeckoSystems complete suite of mobile robot solutions offers a distinct competitive advantage because of being "fast to market."

In March of 2015 the Japanese national health care plan will begin to cover robotic personal assistance applications at a rate of 90%. Because of the demographic issues outlined in the report below a CareBot type personal robot designed to help people live independently in their own home as long as possible will be in high demand. GeckoSystems believes that no economically viable solution can be developed for this market by that March 2015 date without using their technology.

"We continue to be very pleased with the hard work and demonstrable progress made by our associates, Msrs. Hajime Yasumatsu and Katsuji Fujii, in locating, qualifying and presenting to interested Asian businesses that could benefit from our technology. Recently we have had increased activity and serious discussions in the EU and Mediterranean markets. Due to the sensitivity and delicacy of these ongoing and upcoming joint venture discussions, it would be imprudent for us to reveal additional details at this time. I remain personally grateful for our 1300+ stockholders' loyal support and look forward to their being rewarded with a satisfying ROI," concluded Spencer.
